## Profile

Passionate front-end web developer/designer/inventor with a track record for building successful apps and businesses. Seeking a position on a small team of creative people that take on interesting web projects.

## Experience

Co Founder, The Dark Sky Company, LLC; Troy, NY — 2012-2013

Successfully raised \$39,376 via Kickstarter to build a weather forecasting system and iOS app called Dark Sky. Designed and developed Dark Sky — which remains one of the top grossing weather apps for iPhone. Built Forecast.io — a mobile-optimized general purpose weather site — and released a commercial API for accessing our forecast information at Forecast for Developers.

Partner, JACKADAM; Troy, NY — 2007-2013

Along with Adam Grossman, I built dozens of websites for clients — either designing them ourselves, or working with trusted creative agencies. Specializing in smooth animations and playful interactions, we built games, blogs, CMS's, galleries, shopping carts, and digital signage systems. Please see [jackadam.net](http://jackadam.net) for information on select projects.

Programmer, Open Box Technologies; Troy, NY — 2006-2009

Helped develop an early video sharing website — SesameVault — which featured the first video player that worked simultaneously on desktop computers, BlackBerry's, and iPhones.

Managing Partner, VIDVOX, LLC; Troy, NY — 2001-2006

VIDVOX makes software that let performers control and mix video much in the same way that DJ's manipulate audio in real-time. Designed, developed, released, and supported several Mac video apps — starting with GRID while still a student. Brought company to profitability by diversifying product line, bringing on new talent, and reducing overhead.

## Education

Rensselaer Polytechnic Institute, Troy, NY — pursued a degree in electronic art and communication theory — until I left in my senior year to work at VIDVOX full-time.

## Technical Skills

HTML5, CSS, JavaScript, jQuery, WordPress, Ruby on Rails, Node.js, PHP, MySQL, Adobe Photoshop and Illustrator, video editing, Git and Subversion revision control
